Browse Sequences in WebHelp Topics

By Willam van Weelden on 27th July 2012

Streamer text

To add text links, create a Master Page with a header of footer. Add the following script to the header and footer.

1. Open your master page and select the header or footer.
2. Click **Insert > HTML > Advanced > Script**
3. Paste the script above in the **Source** tab and click **OK**.

```
var sForward = canGo(true);
var sBackward = canGo(false);

//Text links
if(sBackward == true)
    document.write('<a href="javascript:void
if(sForward == true)
    document.write('<a href="javascript:void
```

Image links

If you prefer to use image links, you have a few more steps to take. If you simply let the script add an image, the path to the image only works for topics in your project root. Therefore you need the path to the project root so your images will display in all topics.

To get this working, you must first add the images as baggage files to your project. With the following script, you can then add the images to every page. Simply add the script in the header or footer of your master page. This example assumes that your images are in the directory `images`.

Set the filename and path for the active and inactive images in the variables `backsrc` and `forwardsrc`.

1. Create a folder `images` in your project.
2. Add the four files as baggage files in the folder `images`.
3. Open your master page and select the header or footer.
4. Click **Insert** > **HTML** > **Advanced** > **Script**
5. Paste the code from below in the Source tab and click OK.

```
var avenueid = 'avenueimgholder';
document.write('<div id="'+avenueid+'"></
if(gsStartPage == "") {
    setTimeout('createImageLinks()', 500)
} else {
    createImageLinks();
}

function createImageLinks() {
    var sForward = canGo(true);
```
